Milestone 1: Project Idea and Description

Project Title:

[name of your web application]

Tadreeb – Internship & Training Opportunity Web Platform

A. Project Overview:

[Provide a concise introduction explaining the purpose and goals of the web development project.]

Tadreeb is a web-based platform designed to connect university students with companies offering internship and training opportunities. The system centralizes the internship process by allowing companies to publish structured opportunities and students to apply digitally through an organized workflow.

Currently, many students rely on informal communication methods such as email or social media to search for internships, while companies receive unstructured applications without proper tracking tools. This creates inefficiency, lack of transparency, and poor communication.

Tadreeb solves this problem by providing:

- A centralized internship listing system
- Structured student applications
- Digital status tracking
- Role-based dashboards
- Secure document upload (CVs)
- Company-side applicant management

The platform aims to simulate a real-world internship marketplace system similar to professional job portals but focused specifically on student training opportunities.

B. Scope of Work:

[Describe the general features and functionalities required for the website. Include details on user roles, if applicable.]

The system will support **three user roles**:

- Student
- Company
- Admin

1. Student Module

Students will be able to:

- Register and log in securely
- Create and edit their profile (major, skills, GPA, bio)
- Upload CV
- Browse available opportunities
- Filter opportunities by:
    - Field
    - Location
    - Duration
    - Paid / Unpaid
- View opportunity details
- Apply to opportunities
- Track application status:
    - Submitted
    - Under Review
    - Accepted
    - Rejected
- Receive notifications when status changes

2. Company Module

Companies will be able to:

- Register and create company profile
- Post internship opportunities with:
    - Title
    - Description
    - Required skills
    - Duration
    - Location
    - Number of seats
- Edit or delete posted opportunities
- View list of applicants per opportunity
- Download student CVs
- Change application status:
    - Under Review
    - Accepted
    - Rejected

3. Admin Module

Admin will be able to:

- Manage users (students and companies)
- Remove inappropriate listings
- Approve or deactivate companies
- View system analytics:
    - Total users
    - Total opportunities
    - Total applications
    - Application trends

4. System Features

- Role-based authentication and authorization
- Secure file upload for CVs
- Application workflow management
- Filtering and search functionality
- Dashboard analytics
- RESTful API architecture
- Responsive UI design

C. Target Audience:

[Define your target audience or user personas to provide context for the project.]

The primary target audience includes:

1. University students seeking internship or training opportunities.
2. Companies looking to recruit qualified students for internships.
3. Platform administrators responsible for monitoring system integrity.

User Personas:

- A Computer Science student searching for a backend development internship.
- A company HR manager posting a cybersecurity internship and reviewing applicants.
